A: Does Kaspersky activation procedures and policy documentation apply to your version of Kaspersky. For example v10.0.25.0008,0008 A: The latest version of Kaspersky products do not require any activation procedures. The following steps can be used to activate the latest version of Kaspersky Internet Security, Kaspersky Anti-Virus, and Kaspersky Total Security: Download and run Kaspersky Endpoint Security for Business. The Kaspersky Endpoint Security for Business . Download and run Kaspersky Antivirus Internet Security. The Kaspersky Antivirus . Download and run Kaspersky Total Security. The Kaspersky Total Security . In a separate browser window, visit Kaspersky . Enter your email address and password, and click . In the Password field, type the password you used to sign in to your Kaspersky Account when you downloaded the product. In the Account field, type the email address you use to sign in to your Kaspersky Account. Click the Go to License Settings button. In the License node, click Activate. Enter the activation code that you received when you purchased the product. You may also need to update your security definitions from the . Q: Java: How to pass a variable to another class and use it there? I want to open a Class A, and use a variable that I have to create in Class A in another class called B. Class A: public class A { public static int variable; public static int getVariable() { return variable; } } Class B: public class B { public static void main(String[] args) { A.getVariable(); // I want to do something here? } } A: There are three options in this situation: Pass the variable as an argument to the constructor of class A. Put the variable as a member variable of class A. Make the variable static. Example 1: Pass a value to constructor of A: class A { int variable; public A(int variable) { this.variable = variable; } public int getVariable
